## **COVER MESSAGE**

To: Cam Y T Truong / Commissioner for Patents

From: Will Kelty / MagnaWare

April 2, 2004 Date:

Re: Patent Application No. 09/898,171

Thank you for taking the time to speak with me yesterday. Per our

conversation I wanted to confirm our call scheduled for next week 4/9/04 @

11:00AM EST. I'll plan on calling you at 703.605.1169.

Also, I will have

Jo Peleus, who filed the patent on the line with me. We would like to

discuss and get clarification on the following questions:

1) Our system handles incoming (alien) free-text documents which are

categorized to discreet content categories. For this we use a database of

templates. Te selection of the template to use is done by doing lexical and

content analysis on the incoming free text document.

Neither of the Lakritz,

DuFresne, Fields or Donohue do this nor do they categorize alien data for

storage they solve the web presentation problem of backoffice data

(controlled). Are we not unique here?

- 2) We determine the language by doing lexical and content analysis of the incoming free-text data not by web settings or user settings which are not available to us. I believe we are unique?
- 3) We solve the problem of breaking down unstructured text into categorized knowledge to be used for knowledge retrieval and not of database and other controlled (in electronic form) data for presentation purposes. I believe we are unique here too?

Sincerely,

Will
